

# FLOOD PREVENTION BARRIER/ BOX WALL

## PRODUCT DATA SHEET

### Technical Specifications:

**Material:** High-strength polyethylene (HDPE) or polypropylene.

**Weight:** Approx. 10 kg per module.

**Length:** 90cm

**Height:** 80cm

**Width:** 100cm

**Water Resistance:** Sealed with interlocking components and neoprene gaskets for leak prevention.

**Color:** Red

**Lifespan:** 10+ years with proper maintenance.

### Description:

The Flood Prevention Barrier (Box Wall) is an innovative solution designed to provide effective protection against flooding. This modular and portable barrier system ensures rapid deployment and optimal performance, safeguarding properties, infrastructure, and critical areas from water damage. It can create a dam for water up to a height of 80 cm.

### Features:

★ **Modular Design:**

Easily connectable modules for scalability.

Allows custom configurations to adapt to specific site requirements.

★ **Quick Deployment:**

No heavy machinery required.

Deployed by a small team within minutes.

★ **Durability:**

UV-resistant and corrosion-proof material.

Resistant to extreme weather conditions.

### Applications:

- ★ Residential flood protection.
- ★ Commercial property safeguarding.
- ★ Infrastructure and road protection.
- ★ Riverbanks and waterways.
- ★ Emergency flood response.
