

G.I WIRE (GALVANIZED IRON WIRE)

PRODUCT DATA SHEET

Technical Specifications:

Product Type	Galvanized Iron Wire
Material	Mild Steel with Zinc Coating
Coating Type	Galvanized
Tensile Strength	High tensile / soft
Surface Finish	Smooth, corrosion-resistant
Color	Silver / Metallic

Description:

The G.I (Galvanized Iron) Wire is a versatile and durable wire widely used in construction, industrial, and general-purpose applications. It is manufactured from high-quality steel and coated with a protective layer of zinc to provide excellent corrosion resistance and long service life. Designed for strength and flexibility, G.I wire is suitable for binding, fencing, mesh making, and various other applications requiring reliable performance in both indoor and outdoor environments.

Features

- *Excellent corrosion and rust resistance
- *Strong and durable construction
- *Flexible and easy to handle
- *Long service life in outdoor conditions
- *Suitable for multiple industrial and domestic uses
- *Available in various sizes and tensile strengths

Applications:

- *Construction binding wire
- *Fencing and agricultural use
- *Mesh and net manufacturing
- *Packaging and bundling
- *Industrial and household applications
