

STEEL EXTENDABLE BARRIER

PRODUCT DATA SHEET

Technical Specifications:

Material: High-grade steel

Finish: Powder-coated for corrosion resistance

Color Options: Yellow/Black, Red/White

Length: Adjustable, typically 2 meters (retracted) to 4 meters (fully extended)

Height: Standard height of 1 meter

Weight: Approx. 10-15 kg

Design: Cross-sectional steel bars for enhanced visibility and rigidity

Description:

The Steel Extendable Barrier is a durable and versatile safety solution designed for managing and controlling pedestrian or vehicular traffic. Its telescopic design allows for easy extension and retraction, making it ideal for various temporary or semi-permanent applications. Constructed from high-quality steel, it provides long-lasting durability and resistance to harsh environments.

Features:

★ **Adjustable Design:**

Telescopic mechanism allows easy adjustment to the desired length.

★ **Durable Construction:**

Made from high-grade steel with a powder-coated finish for enhanced durability and corrosion resistance.

★ **High Visibility:**

Bright color combinations ensure the barrier is noticeable even in low-light conditions.

★ **Portability:**

Lightweight yet sturdy design makes it easy to transport and deploy.

Applications:

★ **Traffic Management:** Redirecting or controlling vehicle and pedestrian movement.

★ **Construction Sites:** Securing work zones and restricted areas.

★ **Event Management:** Creating barriers for crowd control at public gatherings.

★ **Warehouses and Factories:** Sectioning off dangerous or restricted zones.

★ **Parking Lots:** Managing vehicle entry and exit points.
